ANNOUNCEMENT
AVAILABILITY OF PHOTOMETRIC DATA

J.D. FERNIE

David Dunlap Observatory, University of Toronto, P.O. Box 360, Richmond Hill, Ont. L4C 4Y6, Canada

For about ten years I have had an APT program gathering UBV data on the variable stars V441 Her (= 89 Her), V814 Her (= HD 161796), and R CrB. Earlier data were published, but more recent data have not yet appeared in print. The entire collection will eventually appear in a series of papers analysing the pulsational properties of these stars, but meanwhile they are available on the World Wide Web at the following sites:

V441 Her and V814 Her:	http://ddo.astro.utoronto.ca/89her.html
R CrB:	http://ddo.astro.utoronto.ca/rcrb.html

These sites give references to the published data, and list individual, so-far unpublished observations. The lists are updated four times a year as I receive new APT data. Workers are welcome to use the data provided the source is referenced in any publication.

I remind readers also that a database of galactic classical Cepheid properties (but not individual observations) is available at

http://ddo.astro.utoronto.ca/cepheids.html

All these sites can also be accessed through the homepage of the Astronomy Department, University of Toronto (http://www.astro.utoronto.ca/home.html) under the section headed Faculty Projects.
